ATTORNEY GENERAL'S SECOND SET OF
DOCUMENT AND INFORMATION REQUESTS

D.T.E. 05-8

Respondent: Theodore Poe, Jr.

Information Request AG-2-1

Q. Please identify, in percentage terms, the amount of LNG that will be used in the design winter sendout for the following four heating seasons (2005-06-2008-09). Provide back up calculations.

A. Referring to Schedule EDA-3 (Page 1 of 3) in the Company's filing, during the heating seasons of 2005/06 through 2008/09, LNG forecasted to satisfy the Company's firm sendout requirements can be found in the rows labeled 'DOMAC Vapor' and 'LNG From Storage.' The Company's firm sendout requirements during those heating seasons can be found in the row labeled 'Firm Sendout.' The table below reproduces these numbers and calculates the percentage requested. All volumes are in BBtu.

	<u>2005/06</u>	<u>2006/07</u>	<u>2007/08</u>	<u>2008/09</u>
DOMAC Vapor	2,939	2,950	2,939	3,070
<u>LNG From Storage</u>	<u>7,059</u>	<u>7,048</u>	<u>7,059</u>	<u>6,926</u>
Total LNG	9,998	9,998	9,998	9,996
Firm Sendout	94,558	97,841	101,261	103,098
Total LNG as a Percentage of Firm Sendout	10.6 %	10.2 %	9.9 %	9.7 %
